

19,

NFA

DFA

- 1 its full form is
Now Deterministic
Automata

Full form of DFA is
Deterministic automata

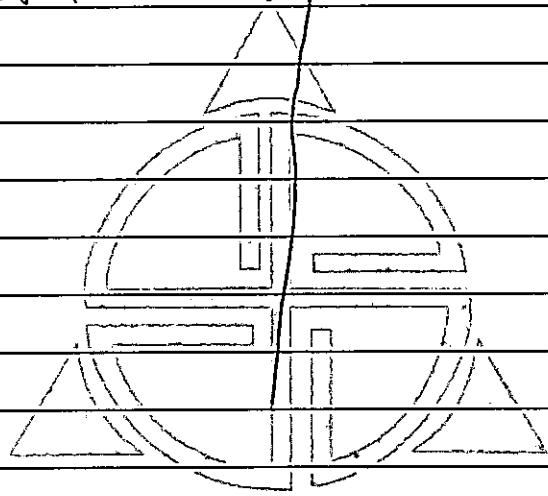

- 2 in this automata
we get output for all

in this automata we ~~get~~
did not get output for all

- ③ All NFA is DFA

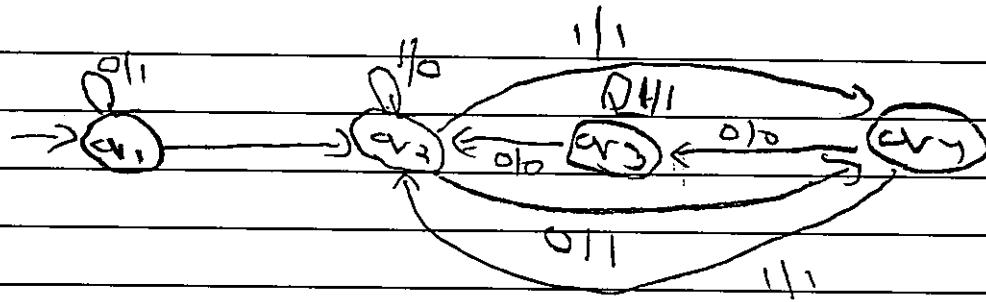

All DFA is not for NFA

Ergebnis D: $\{a_0, a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8\} \setminus \{a_2, a_3, a_7\}$
 $\{a_5\} \cup \{a_6\}$

$$a_0 a_1 = a_{0,0} = a_1 \quad a_{0,1} = a_{1,0}$$

$$a_{1,0} = a_2 \quad a_{1,1} = a_3$$

$$a_0 \neq a_1$$

$$a_0 a_4 = a_{0,0} = a_1 \quad a_{0,1} = a_5 \quad a_0 \neq a_4$$

$$a_{4,0} = a_3 \quad a_{4,1} = a_6$$

$$a_0 a_5 = a_{0,0} = a_1 \quad a_{0,1} = a_4 \quad a_0 \neq a_7$$

$$a_{7,0} = a_7 \quad a_{7,1} = a_7$$

$$a_0 a_8 = a_{0,0} = a_1 \quad a_{0,1} = a_7 \quad a_0 = a_8$$

$$a_{8,0} = a_8 \quad a_{8,1} = a_8$$

Equivivalence \Rightarrow : $\{v_0 v_7 v_8\} \{v_5, v_6\}$
 $\{v_2\} \{v_3\} \{v_4\}$

$$w_0 v_7 = v_{0,0} = v_1, w_{0,1} = v_3$$

$$v_{7,0} = v_7, v_{7,1} = v_8$$

$w_0 v_7$ are not equivalent.

$$w_0 v_8 = v_{0,0} = v_1, v_{0,1} = v_4$$

$$v_{8,0} = v_8, v_{8,1} = v_9$$

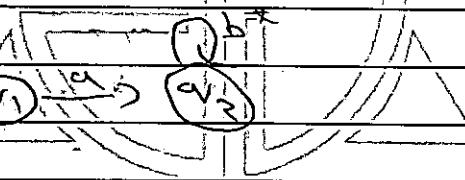

$$w_0 \neq v_8$$

$\{v_7 v_8\} \{v_0\} \{v_1\} \{v_2\} \{v_3\} \{v_4\}$

~~$v_5 v_6$~~

$\therefore L = \{ \dots a a, b b b, | a a, b b b b \dots a a b \dots \}$

So "First"

So the language is strongest
style a रिट्रॉ लैंग्वेज

v_0	v_1	0
v_2	v_3	0
v_4	0	v_5

$L = \{a^h b^k \text{ where } h \geq 1\}$

in Pumping Lemma it should satisfy
3 conditions to prove ~~it's not~~

1) $|L| > 0$

2) $|x - z| \leq p$

3) $x^i z^j$

Let $p = 2$

$L = \{a^i b^j \mid i \leq 1, j \geq 1\}$

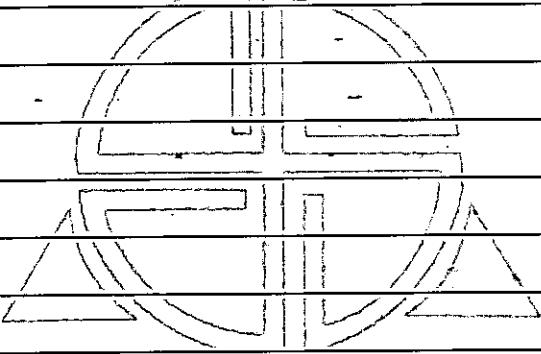

$x = a$

$y = b$

$z = b$

1) $|x| > 0$

$|x| > 0$

True 

ii) $|x - z| \leq p$

$\cancel{x} \cancel{z}$

$y \leq z$

True

Now

$x^i y z^j = a^i a b^j$

Put $i = 0$

$\leftarrow a b \in L$ It belongs to language

Now check for $i = 3$

$$= a^i a^j b^k b^l$$

$a^i a^j a^k b^l \in L$ so belongs to LAFAL

so it is a regular grammar in case 1

It cannot prove for not regular:

case - 2

$$L = \{a^i a^j b^k b^l\}$$

$$\rho = 2$$

now

$$\frac{a^i a^j b^k b^l}{x_i = z_i} \quad \frac{a^i a^j}{y_i = y_j}$$

$$x = a^i$$

$$y = a^j$$

$$z = b^k$$

i

$$|x| > 0$$

$$2 > 0$$

True

ii भानुर्दत्त महाराज

$$|y| \geq 1$$

$$4 \geq 3$$

True

iii

$$x_i = y_i = a^i a^j b^k b^l$$

$$1 + i = 3$$

$$= a^3 a^1 a^1 a^1 a^1 a^1 b^3 b^3 b^3 b^3$$

This also belongs to L

so it is Regular grammar

If a^i and b^k are equal.

~~Construct a finite automata~~

$$(0+)^* (0 \ 0 \ 1 \ 1) (0+)^*$$

(4v0)

$$S_1: E \rightarrow E + T \mid T$$

$$T \rightarrow T^* F \mid F$$

$$F \rightarrow (E) \mid a$$

Put all ~~to~~ nonterminals with new ~~to~~ nonterminals

$$A_1 \rightarrow E$$

$$A_2 \rightarrow T$$

$$A_3 \rightarrow F$$

now write production according to the
new nonterminal symbols.

$$A_1 \rightarrow A_1 + A_2 / A_3$$

$$A_2 \rightarrow A_2^* / A_3 / A_3$$

$$A_3 \rightarrow (A_1) / a$$

now put A_2 in A_3

$$A_3 \rightarrow (A_1 + A_2 / A_2) / a$$

now put A_2 in A_2

$$A_2 \rightarrow A_2^* A_1 a / A_1 a$$

now put A_2 in A_1

$A_1 \rightarrow A_1 + A_2^* A_1 | a \quad A_1 | a \sqrt{A_2^* A_1} | a | A_1 | a$

~~S \rightarrow aB + A~~

~~A \rightarrow aG + AA~~

~~B \rightarrow a | S | aBB~~

Qb

$L = \{ a^h b^{2h} \} \text{ where } h \geq 1$

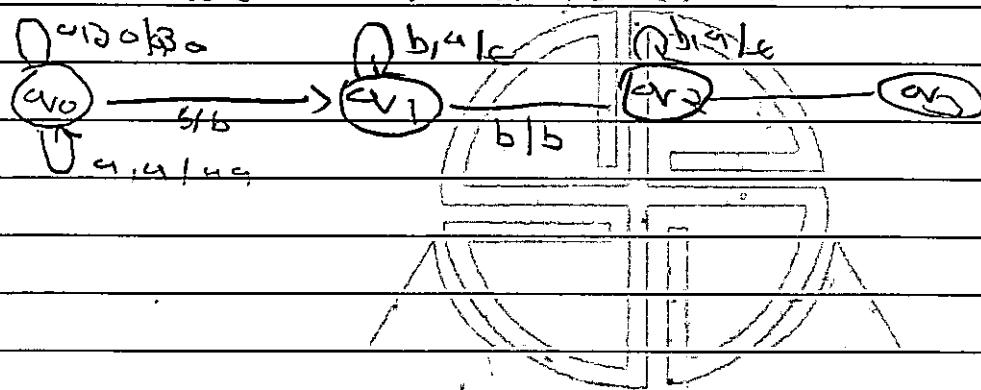

X

$\vdash L = \{ a^k, a^k b, a^k b^k b^k \dots a^h b^{2h} \}$

(b) $k = 2$

$\vdash S \vdash L = \{ a^k b^k b^k b^k \}$

Now we construct PDA for L

ज्ञानादेव तु दीपतिष्ठम्

5 a Partial Function is a function which is defined for some of the elements \Rightarrow it is not defined for all elements

e.g. $x \rightarrow \sqrt{x}$

initial function is defined by 3 functions in numbers and 2 functions in alphabets (3)

o initial function defined for numbers (N)

Zero function \rightarrow in this function if element belongs to this function zero. It means the value of element belong to zero function will be zero.

e.g. $Z(1) = 0$

Successor function \rightarrow in this function every element in this function will get added by +1 e.g. $S(1) = 2$, $S(2) = 3$, $S(3) = 4$, ...

Projection Function \rightarrow in this function It projects the element in ~~set~~ a set of elements e.g. $P_1 \{a, b, c\} = a$

o initial function in alphabets case?

Null function: In this element every alphabet element present in null function will provide null e.g. $Null(x) = Null$

• Goto. (\rightarrow is)

co-homotopy function :- In this function
we consider substitute element in \mathbb{Z} set

$$\text{eg. } \text{cohc}(\mathcal{D}_4) \cong \mathcal{D}_2$$

55

$$\text{Now } f(x, y) = x + y$$

$$f(b, 0) = x + b \\ = b$$

$$g(x)$$

$$z(x)$$

$$f(x, y+1) = x + y + 1 \\ = (x, y) + 1$$

$$H(x_1, y+1) = f(f(x_1, y)) + 1 \\ = v_1^1(x_1, y, f(x_1, y)) + 1 \\ = v_1^2(x_1, y, f(x_1, y))$$

$$H(x_1, y, z) = v_2^1(x_1, y, z) + v_2^2(x_1, y, z)$$

Hence proved It is primitive recursive function as it is explained through its condition

$$P(x,y) = xy$$

$$\begin{aligned} P(x,y) &= x+y \\ &= S(y) \\ &= R(y) \end{aligned}$$

$$\begin{aligned} F(x,y+1) &= x+y+1 \\ &= (x+y)+1 \end{aligned}$$

$$\begin{aligned} H(x,y+1) &= x+y+1 \\ &= x+S(y+1) \\ &= S(x) + S(y+1) \end{aligned}$$

$$\begin{aligned} H(x,y,z) &= S(S(x)) + R(y), \\ &= \text{This is primitive recursive function} \end{aligned}$$

5) Computation means to get an answer or result

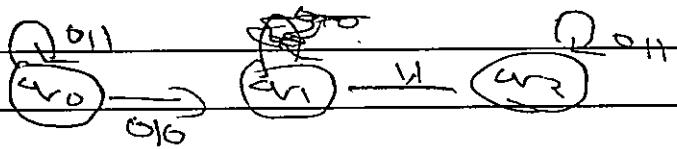

For a particular problem by a computer or a machine, which is done automatically after getting input it gets output

~~Turing model~~ Turing model is a cube said us a digital computer which we are using today. turing machine is most powerful machine and compared to today's digital computer. In turing machine we use input tape to perform computation through which is compute output

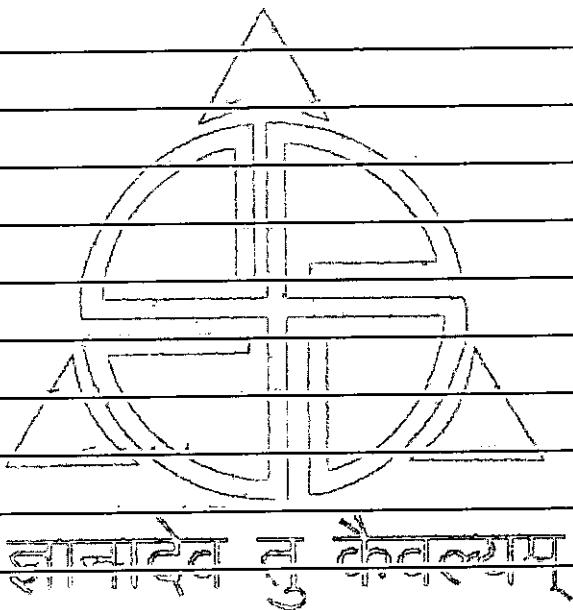

input tape reads binary no. from input tape
